Pay-per-use allows control of SMS
charges

We Understand Your Business Needs

Today, the use of mobile phones has escalated at an exponential rate of 30.9 percent across the Asia Pacific since 2006 (ZDNet Asia). As such, it provides enterprises with an opportunity to leverage on this new technology via Short Messaging Service (SMS) as a mean of interaction between people. It is evident that SMS has gained tremendous popularity as a form of communication and as a marketing platform for many enterprises.

Globalization has resulted in much uniformity among companies. There is a **need for differentiation** among competitors. Hence, SMS can be used as an alternative marketing platform to leverage on the rapid dissemination of information to its target audience. Additionally, with the global proliferation of Information Technology, it is essential that enterprises realize the increasing **need for communication**. Hence, the utilization of SMS within enterprises would allow for two-way transactions and subsequently improved inter- and intra-company communication. The constant demand for interactivity has propelled the **need for timely response**. Therefore, the deployment of SMS technology would ensure immediate receipt of real-time information and in turn, optimal productivity. Lastly, to remain viable and competitive, there is a **need for lower-cost alternatives** to yield higher revenue.

Hence, enterprises should acknowledge the importance of SMS which is essential for all businesses.
